"View" is to display various language settings, toolbar, status bar, chart toolbar and trading symbols, market quotes, data windows, navigators, terminals and smart Expert Advisors, etc., with the hotkey "Alter+V".

"Insert" is to insert various technical indicators and trend lines, straight lines, channel lines, graphics and text, etc., and the hotkey is "Alter+I".

"Chart" is to display various lines, candlesticks, bar charts, timeframes, volume, chart zoom and shrink and chart background color settings, etc., the hotkey is "Alter+C".

The main function of "Tools" is to bring up the "New Order" order interface and change the transaction password (in the options column) with the hotkey "Alter+T".

"Window" is the arrangement setting of the icon window of each time period of each trading symbol, you can choose to til, stack, or you can choose multiple windows to display at the same time, the hotkey is "Alte+W".

"Help" is a help information section where the Client can access the MQL4 website and browse the relevant technical indicators and the Blog's connection with the hotkey "Alte+H".

B. Toolbar

Including trading varieties, chart folders, quotes, data windows and new orders, several chart buttons and zoom in, zoom out buttons and time period buttons, technical indicator lists, etc.

Click the drop-down triangle button for the symbol to display all the symbols on the platform.

Double-click to hide to display the list price window.

For the Navigator button, click Show, double-click Hide.

For the Terminal button, click Show, double-click Hide.

Click on the order screen that appears.

The chart window has several quick switch buttons for several charts, the first one is the bar chart button, the second one is the candlestick chart button, and the third one is the line chart button.

Chart zoom in and out buttons, click the corresponding zoom in and out chart window,

Chart Arrangement button,

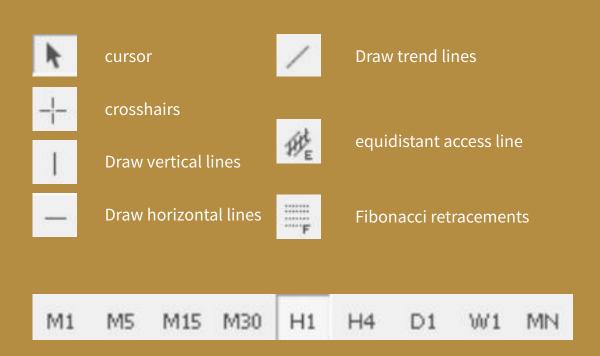

Technical indicator selection button, click the drop-down triangle button to select the corresponding technical indicator,

Time Range button, click the drop-down triangle to select the corresponding time period

C. Scribing tool and timeframe icon bar

Timeframe chart, buttons: M1 is a one-minute chart, M5 is a 5-minute chart, M30 is a 30-minute chart, H1 is a one-hour chart, H4 is a 4-hour chart, D1 is a daily chart, W1 is a weekly chart, and MN is a monthly chart.

★ Chart settings

Charts are divided into line charts, candlestick charts, and bar charts; You can switch directly on the toolbar, as shown in the figure:

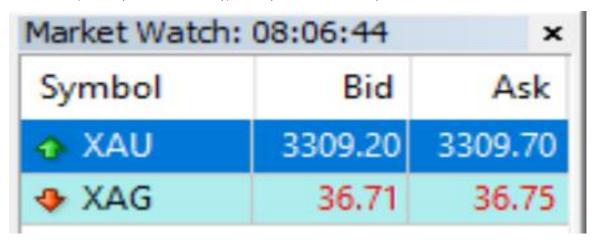

Generally, the Kanban chart is set to a candlestick chart, red rises and green falls, switch to a candlestick chart, and then click on the enlarged tool , set to a suitable size; Then right-click "Properties" to set the color as shown in the picture to confirm. As shown in the figure:

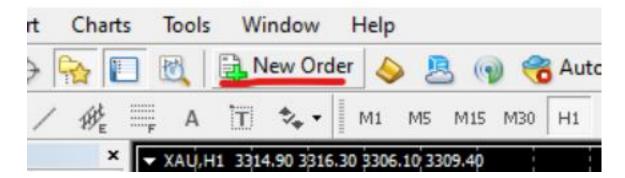

★ Instant deals

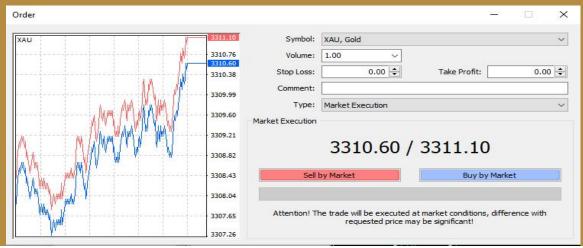

Method 1: Double-click on the trading instrument in the upper left corner, XAU (London Gold), XAG (London Silver)

Method 2: Click "New Order" on the toolbar

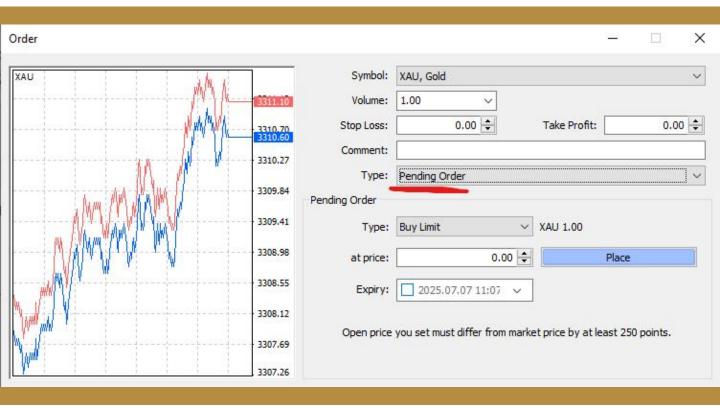

When the transaction is made in real time according to the market price, you can also set the take-profit and stop-loss at the same time, set the number of positions (you can choose the minimum single 0.1 to the maximum single 10 hands), the trading variety, and open long or short orders according to the market.

★ Pending orders

The types of transactions are divided into instant execution, pending order trading, and modified orders. In the display box of the new order, select the transaction type as "Pending Order", you can set the take-profit and stop-loss at the same time, the London gold pending order price must leave the market price at least 250 pips, that is, 2.5 USD, and the London silver is at least 20 pips, that is, 0.2 USD. As shown in the figure:

Note: The deadline is valid until the settlement time of the current day if it is the same day, and if there is no date selection, it is valid for the current week by default.

Pending orders are divided into the following 4 categories:

• Buy stop: A pending order to buy higher than the current price relative to the current price.

Buy limit: A pending order to buy below the current price relative to the current current price.

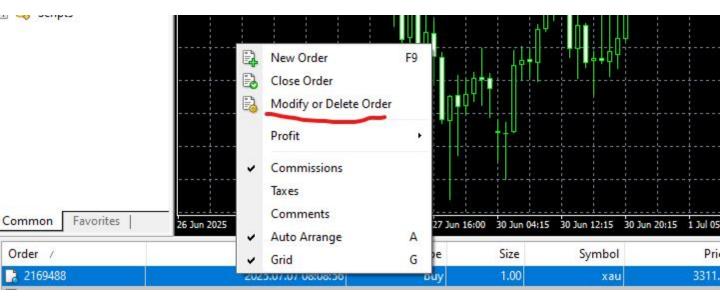

Sell stop: A pending order to sell at a price lower than the current price relative to the current price.

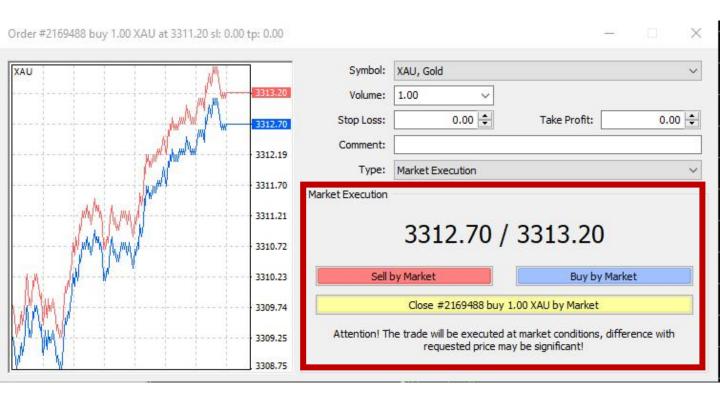

Sell limit: A pending order to sell higher than the current price relative to the current current price.

Note: The pending order type system with red font is not supported.

★ How to set a take-profit and stop-loss

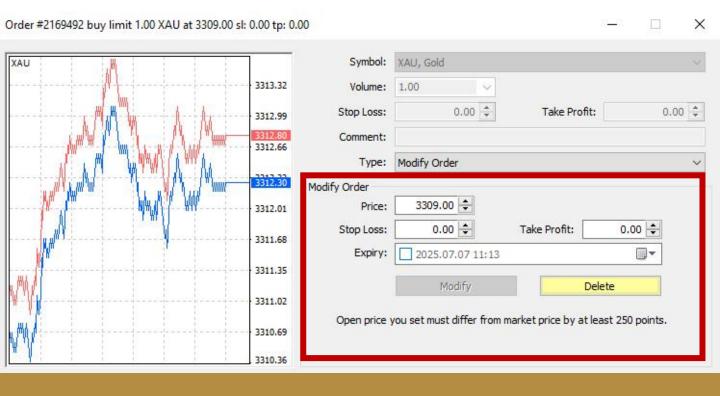

The "Terminal" column at the bottom of the platform is commonly used: transactions, account history, and emails. Switch to the "Transaction" column, you can view the fund status and order status of the account. Set a take-profit and stop-loss on an instant order. Double-click "Stop Loss and Take Profit" in the order of instant execution, or select the order to be set and right-click "Modify or Delete Order", as shown in the figure:

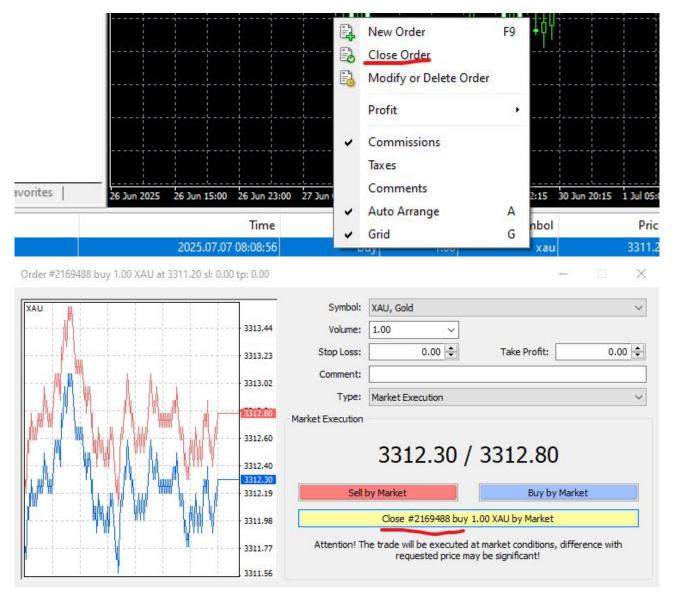

★ How to modify or delete a pending order

Double-click the previously set pending order, or select the previously set pending order and right-click "Modify or Delete Order" to modify the set price, time and delete the pending order. As shown in the figure:

★ How to close a position

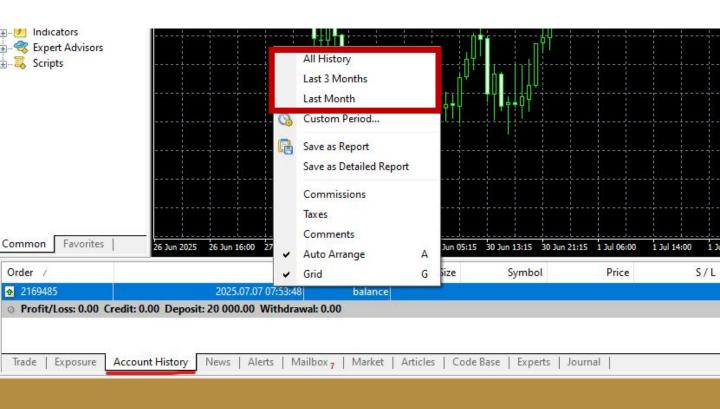

Select the order to be closed in the order displayed in the terminal transaction, double-click the order to close the position, click the order to close the position, or click the order mouse to right-click to close the position, or directly click the "×" behind the order to close the order after the order is displayed in the account history. As shown in the figure:

Note: When the effective ratio of the MT4 platform reaches 20%, the system will force the liquidation, (when the margin is less than 20%, the system will first close the single with the most losses in the client's account to protect the interests of the client's account) MT4 demo account take-profit and stop-loss is 3 pips from the market price. The real account is 2.5 pips off the market. London silver is accepted at a distance of 20 cents from the market price = \$0.02.

★ How to query the history of orders?

Switch to the "Account History" section or right-click to set the desired time period. As shown in the figure:

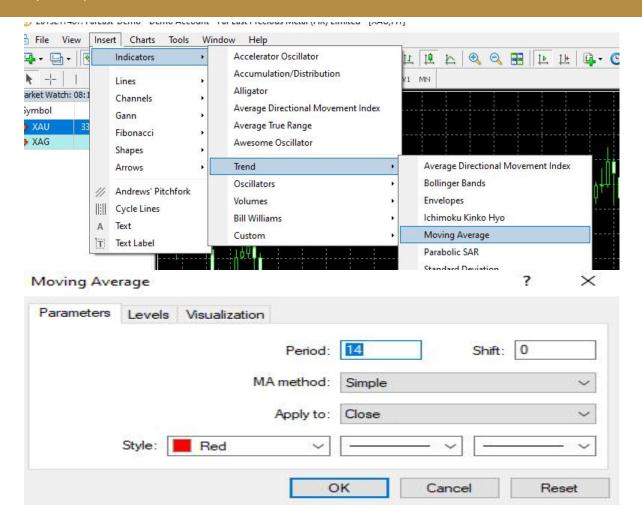

★ How to add and remove technical indicators

1. How to add an indicator:

Click "Insert" in the menu bar and select the desired indicator. "Technical indicators" is to cover a variety of trend indicators, oscillators, volume indicators, Williams indicators and custom indicators, which indicators can be retrieved, MT4 software supports a variety of indicators overlay, you can adjust the size of the main and secondary chart windows and the number of sub-chart windows at will.

Scribing operation: You can draw straight lines, horizontal lines, trend lines, angle lines, channel lines, retracement lines and graphs. Customers can In the Scribing tool and timeframe icon bar or the "Insert" menu bar, select the corresponding graphic line and draw it on the K-line of the main chart window, and to cancel the scribing, just double-click the three dots after the drawing line appears, and then press the "Delete" key.

(**Note:** If you want to draw a more accurate point, you can select a line and select a certain K-line in the area of the generated K-line, hold down the "Ctrl" key and click the high and low points of the K-line at the same time, and then release the mouse) Here we take the moving average as an example, as shown in the figure to set the required parameters.

★ How to add and remove technical indicators

2. How to remove technical indicators:

Select the technical indicator to be deleted and right-click "Delete Technical Index".
